INTRODUCTION

This project focuses on creating a simple and professional resume using pure HTML. The main objective of this project is to understand the basic structure of a web page and learn how HTML tags can be used to organize and display information. The resume includes important sections such as personal details, career objective, educational qualifications, technical skills, projects, and other relevant information. Various HTML tags such as headings, paragraphs, lists, tables, and formatting tags are used to arrange the content in a clear and structured manner. This project provides practical knowledge of HTML and demonstrates how a complete resume can be created without using external frameworks or advanced technologies.

INPUT CODE

```
<html>

<head>
<title>My Portfolio</title>

<style>

    html {
    scroll-behavior: smooth;
    }

    body {
    margin: 0;
    font-family: Arial, sans-serif;
    }

    section {
    min-height: 100vh;
    padding: 50px;
    box-sizing: border-box;
    }

    #home {
    background-color: lightblue;
    text-align: center;
    padding-top: 150px;
    }

    #about {
    background-color: lightpink;
    }

    #skills {
```

```
background-color: lightyellow;  
}
```

```
#projects {  
background-color: lightgreen;  
}
```

```
#contact {  
background-color: lavender;  
}
```

```
h1 {  
font-size: 45px;  
}
```

```
h2 {  
font-size: 30px;  
}
```

```
nav {  
margin-top: 30px;  
}
```

```
nav a {  
text-decoration: none;  
background-color: white;  
padding: 12px 20px;  
margin: 5px;  
border-radius: 5px;  
color: black;  
}
```

```
nav a:hover {  
background-color: lightgray;

OUTPUT CODE

My Skills

- Python
- Java
- JavaScript
- Machine Learning
- Generative AI
- HTML and CSS

My Projects

AI-Based Generative Design System

An AI-based system that learns architectural design patterns and generates new house designs based on user requirements.

Food Delivery Decision System

A Python-based decision system that calculates delivery charges and generates a final order report based on different conditions.

CONCLUSION

This mini project successfully demonstrates the creation of a Student Portfolio Website using HTML and hyperlinks. Through this project, I gained a basic understanding of creating web pages, organizing content using HTML tags, and connecting different pages using links. The portfolio provides a structured way to present a student's personal details, education, skills, projects, and contact information. The use of hyperlinks makes navigation between different sections and pages simple and user-friendly. Overall, this project helped me develop practical knowledge of basic web development and improved my understanding of HTML-based website design and nav
