INTRODUCTION

The JavaScript Grade Calculator is a simple web-based application designed to calculate and display a student's grade based on the marks entered. It provides a quick and easy way to determine grades such as A+, A, B, C, D, and F.

The main purpose of this project is to automate the grade calculation process and reduce the need for manual calculations. The application uses JavaScript conditional statements to compare the entered marks with predefined grade ranges and display the appropriate grade instantly.

Overall, this project demonstrates how HTML, CSS, and JavaScript can be combined to create a simple, interactive, and user-friendly web application for calculating student grades.

INPUT CODE:

```
<html>
<head>
<title>Grade Calculator</title>
<style>
  body {
    text-align: center;
    background-color: white;
    padding: 40px;
  }

  .box {
    background: beige;
    width: 300px;
    margin: auto;
    padding: 20px;
  }

  button {
    padding: 10px 20px;
    background-color:red;
    color: yellow;
    border-radius: 5px;
    cursor: pointer;
    border: none;
  }
</style>
</head>

<body>

<div class="box">

<h2>Grade Calculator</h2>

<input type="number" id="mark" placeholder="Enter mark">

<br><br>
```

```

<button onclick="grade()">Calculate</button>

<p id="result"></p>

</div>

<script>
function grade() {

    let mark =
Number(document.getElementById("mark").value);
    let result;

    if (mark >= 90) {
        result = "A+";
    }
    else if (mark >= 80) {
        result = "A";
    }
    else if (mark >= 70) {
        result = "B";
    }
    else if (mark >= 60) {
        result = "C";
    }
    else if (mark >= 50) {
        result = "D";
    }
    else {
        result = "F";
    }
    document.getElementById("result").innerHTML =
    "Grade: " + result;
}
</script>
</body>
</html>

```

OUTPUT CODE:

Grade Calculator

Grade: A+

CONCLUSION:

The JavaScript Grade Calculator project provides a simple and efficient way to calculate a student's grade based on the marks entered. It helps reduce manual calculations and displays the result quickly and accurately.

Through this project, I have applied HTML, CSS, and JavaScript concepts such as input handling, functions, variables, conditional statements, and DOM manipulation. It helped me understand how JavaScript can be used to make web pages interactive and responsive to user input.

Overall, this project demonstrates my basic web development and JavaScript skills and shows how programming can be used to create a useful and user-friendly application.
